REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art of record neither anticipates nor renders obvious all of the limitations recited in the base claims. Specifically, the combination of semiconductor structures or processes comprising:

- ♦ a first one of the NMOS and PMOS devices includes a gate and a first source/drain regions, wherein the first source/drain regions are recessed and disposed entirely below the surface of the substrate and wherein the first source/drain regions are recessed such that the etch stop layer overlying the gate and the first source/drain regions extends below an interface of the gate and the surface; and a second one of the NMOS and PMOS devices includes second source/drain regions at least partially extending above the surface of the substrate, and wherein the etch stop layer imparts a first strain within the first source/drain region and a second strain within the second source/drain region, the first and second strain being different in magnitude (claim 1).

- ♦ a first one of the NMOS and PMOS devices includes: first source/drain regions recessed within the substrate; and a first gate interposing the first source/drain regions and having a first gate height over the surface, the first source and drain regions are disposed entirely below an imaginary plane extending from the interface of the first gate and the substrate, and a top surface of the first source/drain region lies below the imaginary plane; and a second one of the NMOS and PMOS devices includes: second source/drain regions at least partially extending above the surface, and extending at

least partially above the imaginary plane extending from the interface of the second gate and the substrate; and a second gate interposing the second source/drain regions and having a second gate height over the surface, wherein the first and second gate heights are substantially different, and an etch stop layer overlying the first gate, the second gate, the first source/drain regions and the second source/drain regions, wherein the etch stop layer extends below the imaginary plane extending from the interface of the first gate and the substrate (claim 16).

♦ a first one of the NMOS and PMOS devices includes: first source/drain regions recessed within the substrate, wherein a first contact coupled to the first source/drain region extends below the surface of the substrate; a first gate interposing the first source/drain regions and disposed on the surface of the substrate thereby providing a first interface between the substrate and the first gate; and first spacers on opposing sides of the first gate and each extending from the first gate to a first width; and a second one of the NMOS and PMOS devices includes: second source/drain regions at least partially extending above the surface; a second gate interposing the second source/drain regions and disposed on the surface of the substrate thereby providing a second interface between the substrate and the second gate; and second spacers on opposing sides of the second gate and each extending from the second gate to a second width, wherein the first and second widths are substantially different and an etch stop layer overlying the NMOS and PMOS device wherein the etch stop layer extends below the first interface, wherein the etch stop layer is at least one of a tensile film and a compressive film (claim 28).

♦ the forming of a first one of the NMOS and PMOS devices includes: etching a recesses in the substrate, and forming a first source/drain regions within the recess wherein the entire first source/drain region is recessed within the surface and lies entirely below the surface; and the forming of a second one of the NMOS and PMOS devices includes forming second source/drain regions at least partially extending above the surface; and forming an etch stop layer over the NMOS device and the PMOS device, wherein a portion of the etch stop layer overlies the first source/drain region and extends into the recesses (claim 44).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
